

# WAAS for LESS!

✈️ Add WAAS Satellite Technology to your Cessna single engine and get a **\$3,500 rebate.**

As aviation's most sophisticated GPS system, Garmin WAAS (Wide Area Augmentation System) Satellite Technology gives you five times the coverage, 12 times the accuracy, and many more navigational possibilities than the GPS equipment you're flying with now.

With a network of 25 ground stations monitoring GPS data, WAAS corrects for satellite orbit shifts, clock drifts, and atmospheric signal delays. As a result, the system can pinpoint your location accurately within three meters, more than 95 percent of the time.

And right now, that far greater technology is yours at far less when you install WAAS and return the equipment it replaces to us.

Rebate offer available for replacement of equipment numbers GIA63 (Kit MK206-34-08-1 and -2). While the FAA and DOT are developing precision flight approaches, WAAS satellite coverage is currently available in North America.
